The analysis charts also indicate a trough at low level from this CYIR and passes through Odisha and north Andhra. The N-S oriented trough from west UP and adjoining Bihar to north Odisha and subsequently parallel to the east coast up to the Coastal AP region almost persists during next 4 to 5 days with slight variation.

Another CYCIR over northeast Rajasthan and adjoining Pakistan on day 3 to day 5

No presence of jet core over the Indian region for the next 5 days except over a smaller region south of Delhi in the analysis chart

3. Low level Vorticity:-Positive Vorticity 850hPa (>12 x 10⁻¹/s):

Analysis shows low level positive vorticity mainly over the foothills of Himalaya, along with interior Odisha, Chhattisgarh and adjoining east MP. The high vorticity belts confine over eastern coastal states over Odisha, Coastal AP and Chhattisgarh region along with the foothills during next 3 days

4. Spatial distribution of T-Storm Initiation Index, Lifted Index, Total Total Index, CAPE, CINE and Sweat Index (High potential for thunderstorm):

T-Storm Initiation Index (> 4): Significant threshold values are noticed over Jharkhand, GWB, Odisha, Chhattisgarh and coastal AP in the analysis field. Forecast shows high threshold values over west coast of India particularly over the Gujarat region along with the eastern coastal states covering Jharkhand, GWB, Odisha, Coastal AP during next 3 days.

Rainfall activity over south interior Karnataka, Tamil Nadu and Kerala will increase for the next 2-3 days and decrease thereafter

3. IOP ADVISORY FOR 24 and 48Hrs:

Summary and Conclusions:

Day-1 & Day-2:

The Western Disturbance over northeast Jammu & Kashmir will give rise to hailstorm on day 1 over J&K, Himachal Pradesh and Uttarakhand. This will continue on day 2 over Himachal Pradesh and Uttarakhand.

The presence of the upper air cyclonic circulations, one over northwest Uttar Pradesh & neighbourhood and the other over north Chhattisgarh & neighbourhood and the trough from this system to north Coastal Andhra Pradesh and a third cyclonic circulation over northwest Uttar Pradesh & neighbourhood combined with the high temperature present over the region will cause thunderstorm with gust/squall on day 1 and day 2. Similar is the situation over west and east Rajasthan for day1 and day 2.

The positioning of the upper air cyclonic circulation over Gulf of Martaban & neighbourhood does not have much influence on the rainfall activity over Andaman and Nicobar islands and hence no heavy rainfall is expected over the bay islands for the next 48 days.
