Air Quality and Weather Bulletin for Delhi

दिल्ली के लिए वायु गुणवत्ता और मौसम बुलेटिन

1. Past Weather and Air Quality Observation: The air quality over Delhi was in the Very Poor category with CPCB AQI 350 at 4PM on 11.11.2026. There has been no large change in maximum and minimum temperatures over Delhi during the past 24 hours. The maximum temperatures were in the range of 27-30°C and the minimum temperatures are in the range 16-17°C respectively during past 24 hours over Delhi. The minimum temperatures are markedly above normal (5.1°C to above) at isolated places and above normal (1.6°C to 3.0°C) over remaining parts of Delhi during the past 24 hours. The maximum temperatures were normal (-1.5°C to 1.5°C) over most places of Delhi during the past 24 hours. Moderate fog was reported at Safdarjung airport. Safdarjung reported lowest visibility 200m at 0630 IST, which gradually improved to 800m at 0830 IST of today, 13.11.2026. Palam reported lowest visibility 1000m at 0700 IST to 0830 IST, which gradually improved to 1200m at 0900 IST of today, 13.11.2026. Mainly clear sky with surface wind speeds up to 10 kmph from the southwest direction prevailed over Delhi during past 24 hours. Mainly clear sky with surface wind speeds up to 10 kmph from the west-southwest directions prevailed during forenoon over the region today.

2. Mainly clear sky becoming partly cloudy sky towards afternoon/evening. The maximum temperatures over Delhi are likely to be in the range of 28-30°C. The maximum temperature will be near normal (-1.5°C to 1.5°C) at most places over Delhi. The predominant surface wind is likely to be from the north direction with surface wind speed reaching up to 15 kmph during the afternoon. The surface wind speed will associate with calm wind, gradually increasing up to 5 kmph from the northeast direction during evening and night hours on 13.11.2026. Partly cloudy sky. Mist/shallow fog at most places with moderate fog at isolated places in the morning hours. The maximum and minimum temperatures over Delhi are likely to be in the range of 27°C to 29°C and 16°C to 18°C, respectively. The minimum temperature will be appreciably above normal (3.1°C to 5.0°C) at many places with above normal (1.6°C to 3.0°C) at isolated place, and the maximum temperatures will be near normal (-1.5°C to 1.5°C) at most places over Delhi. The surface wind speed will associate with calm wind gradually increasing up to 05 kmph from the northwest direction during the morning hours. The surface wind speed will increase becoming up to 15 kmph from the northwest

direction during afternoon. The surface wind speed will associate with calm wind gradually increasing up to 05 kmph from the northwest direction during evening and night hours on 14.11.2026. Partly cloudy sky. Mist/shallow fog at most places in the morning hours. The maximum and minimum temperatures over Delhi are likely to be in the range of 26°C to 28°C and 15°C to 17°C, respectively. The minimum temperature will be above normal (1.6°C to 3.0°C) at many places, and the maximum temperatures will be below normal (-1.6°C to -3.0°C) at most places over Delhi. The surface wind speed will associate with calm wind gradually increasing up to 05 kmph from the northwest direction during the morning hours. The surface wind speed will increase becoming up to 20 kmph from the north direction during afternoon. The surface wind speed will decrease becoming up to 10 kmph from the northwest direction during evening and night hours on 15.11.2026. Mainly clear sky. Mist/shallow fog at most places in the morning hours. The maximum and minimum temperatures over Delhi are likely to be in the range of 26°C to 28°C and 14°C to 16°C, respectively. The minimum temperature will be above normal (1.6°C to 3.0°C) at most places, and the maximum temperatures will be below normal (-1.6°C to -3.0°C) at many places over Delhi. The predominant surface wind is likely to be from the northwest direction with wind speed reaching up to 10 kmph during the morning hours. The surface wind speed will increase becoming up to 20 kmph from the northwest direction during afternoon. The surface wind speed will decrease becoming up to 15 kmph from the northwest direction during evening and night hours on 16.11.2026.

3. Predicted maximum mixing depth is likely to be 2350m on 13.11.2026, 2050m on 14.11.2026, 1500m on 15.11.2026, and 2500m on 16.11.2026 over Delhi. The ventilation index is likely to be 10000 m2/s on 13.11.2026, 9500 m2/s on 14.11.2026, 10000 m2/s on 15.11.2026 and 16500 m2/s on 16.11.2026 over Delhi. **The ventilation index lower than 6000 m2/s with an average wind speed of less than 10 kmph is unfavorable for the dispersion of pollutants.**

4. Air quality is likely to be in the Very Poor category on 13.11.2026. The air quality is likely to be in the Very Poor category from 14.11.2026 to 16.11.2026. The outlook for the subsequent 6 Days: The air quality is likely to be in the Very Poor category.
